

**BULLETIN OF THE  
TASMANIAN FIELD NATURALISTS CLUB INC.  
<http://www.tased.edu.au/tasonline/tasfield/tasfield.htm>**

Oct 1998

Number 292

Editor Andrew Walsh

The Tasmanian Field Naturalists Club Inc. encourages the study of natural history and supports conservation. We issue our journal *The Tasmanian Naturalist* annually in October. People with a range of backgrounds and knowledge are welcome as members.

Contact Genevieve Gates (03 6227 8638) for further information, or write to GPO Box 68A Hobart 7001. Bulletin or website articles to Andrew Walsh (146 Misty Hill Rd. Mountain River 7109, 03 62 664543).

**PROGRAM**

General meetings start at 7:45pm on the first Thursday of the month in the Life Sciences Building at the University of Tasmania. Outings are usually held the following weekend, meeting at 10am outside the Tasmanian Museum and Art Gallery entrance, Macquarie St. *If you are planning to attend an outing but not the meeting prior, check as to the timing of the excursion as sometimes unforeseen changes occur.*

5<sup>th</sup> Nov        Nick Mooney (PWS)- **Raptors**

8<sup>th</sup> Nov (Sun) Field trip related to raptors. Exact destination to be discussed at Nov 5<sup>th</sup> meeting.

3<sup>rd</sup> Dec        **Members night.** This is an opportunity for members to give a short presentation on a topic of their choice. Don't forget you can also bring along slides. As this is the last meeting for the year we will be holding a bigger supper than normal afterwards so everyone bring along a plate of something to share.

5<sup>th</sup> Dec (Sat) To be discussed at Members night.

January        **No meeting.**

4<sup>th</sup> Feb        Natalie Papworth (Roy. Tas. Bot. Gardens)- **Roadside rescue of native vegetation.**

7<sup>th</sup> Feb (Sun) A journey to Old Beach to see native roadside vegetation.

4<sup>th</sup> Mar        Mike Pemberton (PWS) **Maram grass in coastal ecosystems.**

**Other Activities**

The Marine Field Naturalists now meet at the Life Sciences Lecture Theatre at Tas. Uni. Usually at 6pm, 2<sup>nd</sup> Wednesday of each month.

Nov 11<sup>th</sup> Barry Bruce. Recovery plan for the Spotted Hand Fish.

Feb 10<sup>th</sup> Mike Sugden. The reef day/night.

**Wildflower Gardens Show**

**Fri Nov 13<sup>th</sup> 10am-6pm, Sat 14<sup>th</sup> 10am-6pm, Sun 15<sup>th</sup> 10am-4pm.**

Adults \$4, Concession \$3, Children \$1. Don't forget we will be holding a display, so if you want to help set it up or contribute display items, turn up on Wednesday 11<sup>th</sup> or Thursday morning 12<sup>th</sup>.

JOIN THE CLUB

by Jim Paterson

I'm often confused  
By the words that are used  
When describing a thing  
Like a bird on a wing.

I constantly fail  
When naming a snail  
But there are among us  
Those who name fungus.

I try to remember  
What flowers in September  
and I'm vague, so it seems  
About monotremes.

But nevertheless  
I must here confess  
I've an interest in bees  
and eucalypt trees.

And things under logs  
And bubbles and bogs  
And whole heaps on things  
that haven't got wings.

But my great dismay  
Is the people who say  
I can't stand exploring  
It's terribly boring.

---

### A Letter From Don Hird.

Don Hird has sent Genevieve a letter,  
so we thought we should publish it in  
the latest bulletin.

"We expect to return to Tas shortly  
before Christmas but too late for the  
December meeting/excursion. We  
leave here early November but will  
take 5-6 weeks in all to reach Tas.  
Things have generally been going  
well although Hally is staying with  
her Tas cousins for a couple of  
months as she had some health  
problems. She will rejoin us in  
Queensland for the journey south etc.

Thanks for send the bulletins etc.  
which I've read with interest while  
I've been here. One of the  
frustrations here is having limited  
access to natural history guides  
although I've got some reasonable  
books on tropical reef fish and usually  
recognise another one or two each  
time we go snorkelling.

A month or so ago I saw a dugong,  
(captured by fishermen for kai kai) for  
the first time. It's hard to guess  
dugong numbers accurately but to the  
west is a very large area of shallow  
lagoon and reef habitat that is sparsely  
populated by people, so maybe plenty  
dugongs.

Best regards to all, Don Hird."

### Help Wanted!

The Seabird Project begins in October  
and runs through to March 1999. The  
project will involve surveying  
populations of shore birds and  
migratory waders, and the project  
needs regular observers to help with  
the study. People with some  
experience observing these birds are  
preferred, but training can be  
provided. If you would like to  
volunteer, **call Beatrice Bentley on  
6234 6440 as soon as possible!**

---

WOMBAT

by Charles Thomson (age 10)

The wombat fell asleep  
In his burrow so deep  
That a birds loudest tweet  
Would not wake him from his deep sleep

---

## Outing Reports

### Federation of Field Naturalists Weekend, King Island 26-27<sup>th</sup> Sep by Andrew Walsh.

About 20 people from around the state (including myself & my wife Amanda, Kevin Bonham and David Ratkowsky) made it to King Island for the Federation Weekend hosted by the local field naturalists club.

The TFNC four flew up on Friday morning, piloted by Rob Taylor's son Matthew (Matthew tells me Rob is having a wonderful time skydiving in Africa and white water rafting down the Zambize river!). Using a hire car we drove to Sea Elephant point (no sea elephants to were seen, or sea for that matter!) where we arrived just in time to watch a sea eagle soar low over the lookout platform. Amanda and I then dropped Kevin and David off somewhere between the lookout and Naracoopá, where they spent the remainder of the afternoon collecting

along the roadside forest, while Amanda & I drove around the island.

That evening the King Island Field Naturalists Club hosted a barbecue at the Grassy accommodation where everyone was staying, and the following Saturday the field trips began. Led by a local who was the last manager of the now closed Scheelite mine, we were given a guided tour of the enormous open cut and the surrounding land on which the mine company had spent two million dollars rehabilitating the site. In the afternoon, the King Island Field Nats led an impressive walk into the Grassy River Gorge. From the air, King Island appears extremely flat, consisting mostly of pasture truncated occasionally by small patches of forest. This appearance conceals the fact that in some places small waterfalls can be found in the bottom of steep gullies.

Field Naturalists at the Calcified Forest on King Island on the Federation Weekend 1998.

On the Saturday night we had a very sociable dinner at the local Grassy Club. On the Sunday morning delegates from various clubs met for a short Federation business meeting while remaining club members walked around the Grassy township area.

After the meeting we all drove to the Calcified Forest on the south west side of the island where a short walk through dunes took us to a spectacular landing where dunes had claimed the forest some 5000 years ago, causing a chemical reaction that resulted in calcification of much of the woody tissues of the trees. As the dunes erode, the calcified deposits are exposed revealing eerie bleached stem-like structures.

After lunch we visited the dramatic Seal Rocks, where the Roaring Forties, and the seas they churn up, crash against the literally breathtaking cliffs and rocks. After spending some time exploring the area, the TFNC four had to leave early to catch our flight back to Hobart, which ended a perfect weekend as the flight home took us on a direct diagonal line across Tasmania in crystal clear skies.

Moth found beside track to Calcified Forest, King Island (probably 'Peacock Moth', *Dasyopodia selenophora*). Photo A. Walsh.

### PLATYPUS

by Isabella Thomson (age 8)

Platypus beside the river lies  
Gone to sleep and closed his eyes  
    Suddenly he got woken up  
By a huge animal that held him up  
    It wasn't like a gorilla's hand  
    It was wrapped around him  
        like rubber-band  
    Suddenly he found himself flat  
On the ground with an elephant  
    looking straight down at him.

### LAND OF THE GREEN SPONGE

by Tam Kincade, April 1997

Howling winds and thick mists  
Greet me as I cross the plateau,  
    Knocking me from my feet  
And soaking me from head to toe.

Jagged peaks and spongy ground,  
Tiring my legs and rolling my feet  
As I plough across Nature's outcast,  
    This desolate island in the sea.

Who could love a place like this?  
Who could never want to leave?  
    Desolation isn't part of it,  
    It's Nature you can't believe.

Ageless beauty and rolling plains,  
A myriad of lakes and plants,  
    Gigantic penguin colonies,  
And humungous sea-elephants.

My heart will always be here,  
Inside me part will want to know-  
    Are albatross chicks hatching?  
Is the plateau covered in snow?

Too soon I leave this beauty  
And I will look back to see  
    That fair majestic land-  
Macquarie Island, of the sea.

See last page to find out who won the poetry competition.

## October 3<sup>rd</sup> Hastings Thermal Pool.

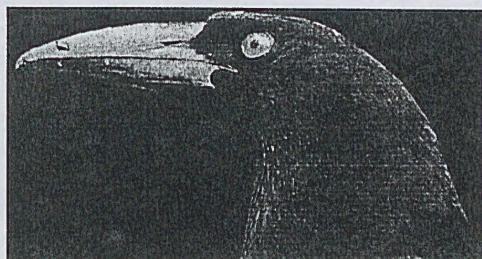

Julia Scott, Marc Gates, Genevieve Gates, Stephen Gates, and Amanda Thomson in the thermal pool at Hastings on the October excursion.

The October excursion visited the Hastings Thermal pool area. Originally it was planned as a follow up to the fascinating talk by Phillip Bethge on Platypus, as we were hoping to catch a glimpse of one in the streams nearby the pool. As well, Spotted Tailed Quolls are often observed around the pool during the day. However, it was announced at the October meeting that the club will also host a barbecue to take advantage of the facilities at the pool. This idea was conceived after the last bulletin was mailed out, however the next barbecue will be advertised well in advance so as to give all members an opportunity to attend.

As it transpired, the weather on the Saturday was very bad- cold, windy and raining and only ten members braved the conditions. We were greeted by a Quoll upon arrival, and those brave enough to take a swim observed a Pademelon Wallaby near

the pool. After lunch (which we had to vigorously defend from the marauding Currawongs) we took a stroll around the creek walks. Genevieve found a number of fungi including *Daldinia* (Cramp Ball), *Bertrandia astatogala*, *Entoloma rodwayi*, *Entoloma* sp. and handsome *Stropharia formosa*. After the walk the group visited the Hastings Caves where a fruiting fungus (unidentified by the observers) was seen in the cave.

Currawong at Hastings Thermal Pools. Photo A. Walsh.

**And the winner is....**

😊 **Isabella Thomson** 😊

Congratulations Isabella and many thanks to the other entrants of our competition. Isabella's prize will be presented at the meeting in November (5<sup>th</sup>).
